COMPANY PROFILE

KOS ENGINEERING LTD

OUR VISION

To be the leading EPC Company Operating in multiple sectors in the Engineering and Construction industry by focusing and providing our clients with responsible value engineered and innovating solutions to meet their needs for sustainable development.

OUR MISSION

Our mission is to operate responsibly as a professional with first class technology and to execute a sustainable engineering and construction model to the best satisfaction of our clients, be profitable & grow by capturing new opportunities.

ABOUT US

K.O.S Engineering Ltd is an indigenous Engineering and Construction company, founded in 2019 and incorporated as a limited liability company in 2021.

With our well trained, certified, experienced personnel, we have the capacity and expertise needed to meet our client's every service requirement on time and on budget. From fabrication to scheduled maintenance to facility turnarounds to emergency response. We are committed to Safety, Quality, Delivery, Cost and Environment.

We have implemented quality assurance procedures that are consistent with ISO-9001:2015 standards in preparedness for certification. We understand and remain highly committed to the quality and excellence demanded by industry-wide standards.

OUR STRENGTH

K.O.S Engineering is managed by professionally qualified and pro-actively motivated personnel of different experience and nationalities to achieve set objectives in a professional manner.

Further advancement, development and growth in management system is continuously imparted through specialized training programs by the company periodically both in-house/on the job and/or through external agencies. The company provides excellent working environment to achieve high productivity with safety and quality as our watch words.

Effective bilateral communication in the organization provides the personnel with an understanding to achieve overall project schedule with highest quality as a common goal.

Our unique selling point is our ability to harness available local resources and/or sourcing from the international manufacturer/market to provide quality service in the safest possible manner with zero to minimal impact on the environment.
